DEFINITION:

Blockchain: What Is a Blockchain?

A blockchain is a distributed database or ledger shared among a computer network's nodes. They are best known for their crucial role in cryptocurrency systems for maintaining a secure and decentralized record of transactions, but they are not limited to cryptocurrency uses.

Blockchains can be used to make data in any industry immutable—the term used to describe the inability to be altered.

Cryptocurrency: A cryptocurrency is a digital currency, which is an alternative form of payment created using encryption algorithms. The use of encryption technologies means that cryptocurrencies function both as a currency and as a virtual accounting system. To use cryptocurrencies, you need a cryptocurrency wallet.

STARCOIN TOKEN (STAR): STAR is the native token of our Starmall international platform.
